

H15

15" THREE-WAY HORIZONTAL ARRAY LOUDSPEAKER

FULL HORN-LOADED DESIGN FOR PRECISE NEAR & FAR FIELD SOUND PROJECTION

FEATURES

- The H15 by VERITY AUDIO PRO is a high-output active 3-way horizontal line array loudspeaker with a 15-inch low-frequency driver.
- The H15 features a 15" woofer, a 10" midrange driver, and a 3" high-frequency driver, all horn-loaded.
- The coverage pattern of each cabinet is: 15° horizontal dispersion, and a 15° + 75° asymmetric vertical projection angle.
- Using dedicated rigging hardware, 24 H15 units can be assembled into a full circular sound ring, ideal for central cluster sound reinforcement applications.
- Alternatively, 1–12 units can be configured into a 15°–180° arc and stacked on subwoofers, meeting the needs of various sound reinforcement applications.
- The H15 employs a fanless natural convection cooling design, achieving zero operational noise while protecting internal circuits from dust and moisture, thus enhancing long-term stability and service life.
- The H15 supports TCP/IP loop (daisy-chain) connection to host control software via two RJ45 ports on the rear panel.
